## TERMS OF REFERENCE

### Supply and Delivery of ICT Equipment and Supplies to Support the Implementation of FishCoRe FishCRRM Subcomponents Activities

#### I. BACKGROUND

A comprehensive approach to fisheries governance is prioritized in FishCoRe, a seven-year project supported by the World Bank, with an emphasis on the social and ecological aspects of the Philippines Waters and its resources. It is dedicated to utilizing an open, transparent, and science-based foundation. The Ecosystem Approach to Fisheries Management (EAFM), as described in RA 10654, is adopted by this project. It emphasizes a comprehensive strategy that strengthens the human element, maintains, and conserves the Philippines Waters and its resources, and manages fisheries in a transparent, inclusive, and scientifically grounded manner.

Among the three (3) components of the project is the Fisheries and Coastal-Resilient Resource Planning and Management Component (FishCRRM) which aims to create an enabling environment that on: (a) the establishment of functional and efficient governance mechanisms that foster broad-based participation in fishery management; (b) scientific and technical assessments to set the planning targets and parameters and corresponding performance indicators, as in the form of target reference points (RPs) and harvest control rules (HCRs); (c) a cross-sectoral coastal management resiliency framework intended to promote sustainability and resiliency and minimize resource use conflicts in coastal and marine waters; and (d) building of the necessary capacities, systems, and tools for scientific, result-based, and participatory FMA planning and governance.

Within FishCRRM, Subcomponent 1.1 is implementing the Boat and Gear Inventory (BGI), a critical activity that generates baseline data on fishing effort. The BGI provides essential information on the number, type, and distribution of fishing boats and gears operating in FMAs. These data serve as input for establishing target reference points (RPs), harvest control rules (HCRs), and other science-based management measures for sustainable fisheries.

To ensure the efficient and accurate implementation of the BGI, the procurement of laptops and ICT accessories is necessary. These tools will be used for the following:

- 1) Processing and managing databases,
- 2) Generating reports and analyses for decision-making, and
- 3) Ensuring secure data storage and sharing within the FCUs, RPIUs, FishCoRe NPMO and other partner agencies.

Hence, this procurement directly supports the operationalization of Subcomponent 1.1 and contributes to building the technical capacity of BFAR staff in implementing a modernized, technology-enabled BGI.

The procurement of ICT equipment under FishCRRM Subcomponent 1.2 is vital to effectively implement its key activities—formulating ecosystem-based Aquaculture Development and Management Plans (ADMPs) and establishing a GIS-based aquaculture

farm inventory system. These tools will enable efficient data collection, processing, and analysis, support the creation of digital maps and databases, and strengthen coordination among stakeholders. Reliable ICT systems will also make it easier to monitor progress, document results, and integrate ADMP outputs into local development plans, helping ensure that aquaculture in FMAs 6 and 9 is managed more efficiently, transparently, and sustainably.

For the FishCRRM Subcomponent 1.3, will support the integration of fisheries, aquaculture, and marine habitat management and restoration plans into legal, policy, and planning frameworks of selected local government units (LGUs).

The procurement of ICT equipment in Fish CRRM Subcomponent 1.3 will be used for the Fisheries Resource and Ecological Assessment (FREA), Coastal and Marine Habitat Protection, Rehabilitation and Management (CMHPRMP), Marine Spatial Planning (MSP) and Monitoring, Control, and Surveillance (MCS).

## II. OBJECTIVES

The procurement of ICT supplies aims to:

1. Support the implementation of the BGI by providing appropriate ICT tools for field data encoding, consolidation, and validation.
2. Ensure timely report generation, analysis, and visualization of BGI results in support of adaptive fisheries management across FMAs.
3. Strengthen BFAR's institutional and technical capacities in fisheries data management and reporting, aligned with FishCRRM Subcomponents' objectives to provide scientific basis for FMA governance.
4. Intended to support the development and implementation of the Aquaculture Development and Management (ADMP) and the Aquaculture Information Management Systems.
5. Enable resource and ecological assessments by providing ICT tools for systematic data collection, processing and analysis, ensuring accurate information on coastal and marine ecosystems.
6. Strengthen the Monitoring, Control and Surveillance (MCS) operations by equipping staff with technology that facilitates efficient documentation, reporting and sharing of information to strengthen compliance and enforcement; and
7. Aims to equip FishCRRM project staff with necessary tools to efficiently produce required outputs and ensure the timely implementation of FishCoRe project targets and deliverables.

## III. DELIVERABLES

#### IV. ADDITIONAL TECHNICAL DOCUMENTS

The bidder shall provide a certified true copy of a valid and current Accreditation/Certificate, or Partnership from the Product Manufacturer that the bidder is legally authorized to sell their products.

#### II. DOCUMENTS TO BE SUBMITTED BY THE WINNING BIDDER

Below are the additional requirements that must be complied with during the project implementation and before the project acceptance:

1. Unless otherwise provided and complied in the technical specifications, the bidder shall provide certification indicating their provision of one (1) year warranty on the parts and services of the ICT equipment for Lots 1-4.
2. The bidder must provide a Duly Notarized Certificate that will provide minimum four (4) hours response time for technical support or Service Level Agreement (SLA).

**III. DUTIES AND RESPONSIBILITIES OF WINNING BIDDER**

1. Scope of work;
  - 1.1. Supply
  - 1.2. Delivery;
  - 1.3. Repair Services; and
  - 1.4. For laptops and desktop workstations, the operating system (OS) must be licensed or activated.
2. Responsible and accountable for any damage caused solely by the Contractor or its agent during the delivery process.
3. Upon delivery;
  - 3.1 Install required start-up applications of the equipment
  - 3.2 Run/Test the equipment

**IV. DUTIES AND RESPONSIBILITY OF THE END-USER/ FISHCORE IT STAFF**

1. Assist winning bidder during delivery.
2. Check and evaluate all the delivery and supply of the winning bidder.
3. Make a detailed delivery report for the product that will be delivered.
4. Issue a Certification of Inspection and Acceptance upon determination by the IT Staff that the delivered equipment and components are complete, genuine license and will include technical support.
5. Pay the Contractor in accordance with the condition set in Payment Scheme.
6. Conduct supplier evaluation and delivery evaluation that will be submitted to the management.

**V. SCHEDULE OF DELIVERY**

Delivery, installation and testing period of sixty (60) calendar days upon conforme of the Purchase Order (PO).

**VI. PLACE OF DELIVERY**

**Name:** Property Section, BFAR Central Office  
**Address:** BFAR New Building, Property Section

**VII. PAYMENT SCHEME**

Payment shall be made upon submission of requirements, delivery completion of the equipment, and issuance of Certificate of Inspection and Acceptance by the FishCoRe IT Staff that the delivered equipment and components are complete, usable and in good working condition.

## **IX. LIQUIDATED DAMAGES**

Where the Bidder/Contractor refuses or fails to satisfactorily complete the work within the specified contract time, plus any time extension duly granted and is thereby in default under the Contract, the Contractor shall pay BFAR for Liquidated Damages pursuant to implementing rules and regulations of World Bank and R.A. 12009.
